1. **DETAILED ACTION**

This action is responsive to the correspondence files on January 18, 2001.  
Claims 3-9, 12-18 and 20 are cancelled. Claims 1, 2, 10, 11 and 19 are pending. Claims 1, 2, 10, 11 and 19 represent network traffic monitoring system and monitoring method.

2. ***Claim Rejections - 35 USC § 102***

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1, 2, 10, 11 and 19 are rejected under 35 U.S.C. 102(e) as being unpatentable over Engel et al. U.S. 6,115,393.

Engel teaches the invention as claimed including network monitoring.

As to claims 1, 10 and 19, Engel teaches a traffic monitoring system, a traffic monitoring method, and a recording medium readable by a computer, tangible embodying a program of instructions executable by the computer to perform a traffic monitoring method, which monitor network traffic in a network in which transmission priority of a packet to be transmitted in the network is changed according to an attribute of the packet, comprising:

A monitor unit which monitors transmitted packets (column 3, lines 25-27); and

An accumulate unit which accumulates, separately for each attribute, a quantity of the monitored packets and a combined total length of monitored packets (column 3, lines 27-28; column 40, line 60 to column 41, line 8).

As to claims 2 and 11, Engel teaches the traffic monitoring system, and monitoring method of claims 1 and 11, wherein the packets are IP packets in an IP network, and the attribute includes at least one of a service class and sub network address of the IP network (figure 3; column 8, lines 32-34).

#### **4. *Response to Arguments***

Applicant's arguments with respect to claim 1, 2, 10, 11 and 19 have been considered but are moot in view of the new ground(s) of rejection.

**5. Conclusion**

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
